Plant Problem

Signs/Symptoms

Treatment

Bagworm

Early in the season the bags are quite small and foliage appears desiccated and riddled with small holes. In late summer, bags are large, and severe defoliation occurs around them.

Remove the previous year's bags on the host before May 1. Treat larvae while bags are small, before July 1. Use *Bt* or appropriate insecticides to conserve natural enemies. Later in the season, treat hosts with thorough coverage, but effectiveness may be poor.
